

## **ABOUT-ME**

Hello! I am a self-determined and energetic student of BCA (Bachelor of Computer Applications) with an inclination for technology and a desire to do well in the data driven-world of computer science. Right now, I am one of the students, however, I have no intention to put my academic training and other skills to practice and contribute to the IT industry.

My experience working in the field of computers has provided me with firmer knowledge of programming languages like Java, Python, C and C++; as well, I have grown more proficient in database management systems and software development methodologies. I am resilient and like settings that make me think critically and to be creative.

I have enthusiastically participated in many projects and extracurricular activities in order to gain deep experience such as web development, software testing, and data analysis during my academic career. In addition to learning these technical skills, I have gained a better understanding of the role of the team players, as well as good communication and adaptation.

I particularly affirm my devotion to ongoing learning and being familiar with all new technology. I hope to gain a deeper understanding of things like artificial intelligence, Data Science, and Web Development, and eventually intend to participate in the process that substantially transforms the discipline of computation.

I am eager to apply my skills and knowledge to real-world challenges, while also embracing opportunities for personal and professional development.

Let's connect and explore how we can collaborate to make a positive impact in the ever-evolving landscape of technology. I am open to new opportunities, mentorship, and networking with individuals who share a passion for leveraging technology for positive change.

Thank you for visiting my profile. I look forward to connecting with you!
